

ROBO **DRAIN**

Model NLD24-T **Pneumatically Powered** **Condensate Removal System**

Patents Pending

Features....

- ◆ **See Through Vessel**
- ◆ **Fully Pneumatic**
- ◆ **No Wasted Air***
- ◆ **Low Profile**
- ◆ **Made in U.S.A.**
- ◆ **250 PSI Design**
- ◆ **Ball Valve Stem Support System**
- ◆ **Ideal for Oil/Water Separators**
- ◆ **Non-Clogging Ball Valve**
- ◆ **No Strainers to Clean**
- ◆ **Operates On Demand**
- ◆ **Manual Test Button**

* A typical 1/8" open bleed in a compressed air system with a pressure of 100 PSIG, wastes 26 SCFM. With an electricity cost of \$0.07/kW-Hr, this equates to **\$2,643.00** of air loss per year. (Note: A 1/4" bleed = 104 SCFM which at 100 PSIG equates to **\$10,572.00** of air loss annually.)

DESIGN

The **ROBO DRAIN** is the ultimate demand operated drain. The unit is fully automatic, no electricity is required. Its low profile gives you the advantage of installing it in areas where the vessel to be drained is only a few inches from the ground. The **ROBO DRAIN's** design also eliminates the need for the installation of a vent line for most applications. A unique air valve design uses a magnetic force to ensure both a positive opening and closing that will prevent any air loss. The magnetic force is cleverly positioned away from the condensation level to prevent any attraction of metal particulate. An innovative ball valve support and positioning system prevents the side-loading problem which otherwise would cause premature sealing failure around the valve stem. Rifle drilled discharge porting ensures that scale and rust will exit through a 1/2" ball valve. The **ROBO DRAIN** will not clog ---- no strainer required.

OPERATION

Condensation enters through one of two ports. The see-through vessel allows visual inspection of the condensation as it rises. A stainless steel float rises with the level of condensation and positions a magnetic force over the valve housing. When the liquid level reaches the desired level, the magnet in the valve housing snaps upward and allows air to pass through a stainless steel seat. The air then moves to a non-lubricated air cylinder causing it to extend and open the ball valve. Condensation, scale and rust particles rapidly exit the unit. Before any air is lost, the float removes the magnetic force from the valve and the seat is covered with a viton seal. A powerful spring returns the air cylinder to its normal position and rotates the positive closing ball valve back to its normally closed position. The pilot air used to actuate the air cylinder is isolated from the air in the drain's reservoir.

SPECIFICATIONS

Inlets: (2) 3/4" NPT
Outlet: 1/2" NPT
Power: Clean, Dry Compressed Air 80 to 130 PSI
Housing Pressure: 0 to 250 PSI
Operating Temperature: 32° to 180° F.
Weight: 16 lbs.
Discharge: 24 Ounces per cycle.
72 & 110 ounce models available

MATERIALS

Reservoir: Aluminum & Composite
Valve: Bronze w/SST Ball and Stem
Float: Stainless Steel
Seat: Stainless Steel
Seal: Viton
Test: Manual Test Button

OPTIONS

High level alarm, heater, stainless steel ball valves, condensate removal for vacuum systems.

All design specifications are subject to change without notice.
